

Grow with Google: Lesson 4

Project: Mockup to Article

1. Mockup to Article Overview

- Write the markup required to make the site look identical to the PDF

2. Mockup to Article

- Project Self-Review.
 - What new skills have you learned?
 - These skills are not new to me, although I did learn about some deprecated tags, like `<strike>`.
 - What has been easy?
 - This has all been very easy for me.
 - What has been difficult?
 - Going back and forth opening files in Chrome, which doesn't natively open local files, was annoying, so I ran a local server with Python.
- How have you used the problem solving strategies from the first project to overcome challenges so far?
 - Research was a big thing for me. In my initial run learning HTML and CSS, the Mozilla Developer Network didn't exist yet, so my primary resource was a book. It's very nice to be able to search a single, trusted network.
